THE PNEUMATIC ADVANTAGE

COST EFFECTIVE

Economical
With fewer parts and relatively simple mechanics, air tools provide low-cost maintenance and operation that you can count on to get your job done.

Longer Life
Air tools are powered by air, not on-board motors, resulting in fewer breakdowns, easier repair and longer life.

Easy Repair
With less parts and no electronics, air tools can easily be rebuilt in-house, reducing downtime. Most cordless repairs must be sent off for factory maintenance or repair.

RELIABLE

Built to Last
Air tools can work hard all day every day and keep coming back for more, year after year. They can routinely handle more duty cycles – trigger pulls + usage time – than cordless tools.

Dependable
Air tools offer consistent performance in extreme temperatures, both hot and cold, resulting in less downtime.

Greater Access
Air tools are generally smaller in size and weight, getting you into the tight spots and hard to reach places with ease.

USER FRIENDLY

Safer
With no electrical components or power source on-board, air tools reduce the risk of electric shock and fire hazard.

Better Ergonomics
Lighter weight, less vibration, and better balance than cordless tools, air tools give you more control with less fatigue.

Simple
Easier to rebuild with simple tune-up kits. Less money spent on parts and labor.
